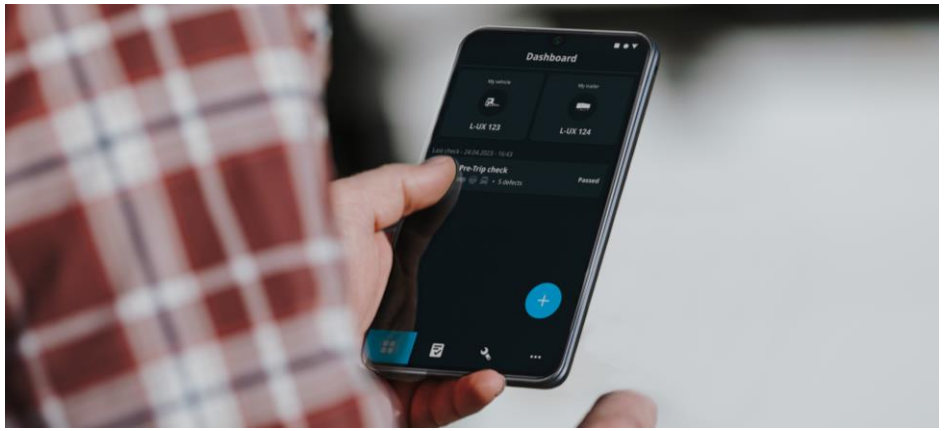
webfleet



Webfleet Vehicle Check

Enhance safety and fleet efficiency with digitised inspections

Smarter inspections, safer vehicles and assets

Webfleet Vehicle Check digitises your drivers' day-to-day walkaround inspections. The mobile app minimises paperwork and streamlines the compliance process, meaning you can act quickly to resolve vehicle and asset defects for safer operating conditions.

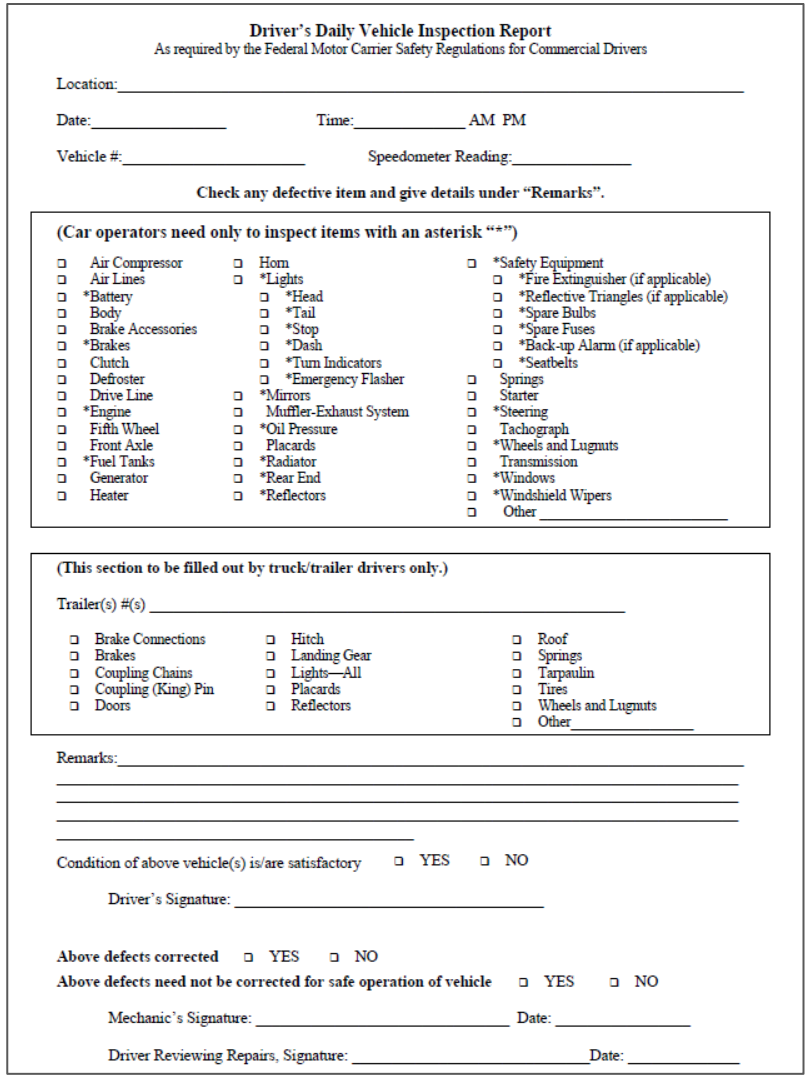
What is a vehicle checklist?

- A vehicle checklist is mainly intended for performing vehicle checks or inspections.
  - It's also known in the United States as a Driver Vehicle Inspection Report (DVIR)[1]: a formal record confirming a driver has completed an inspection on a commercial vehicle, stating that it's safe for operation.
- Vehicle inspections are an important part of a driver's daily routine to keep vehicles in good condition. This helps:
  - Avoid preventable incidents and accidents.
  - Provide a safe environment for the driver and anyone around the vehicle.
- While safety is the main reason for a vehicle checklist, there's also a regulatory need for inspections. National regulations and company internal policies are increasingly mandating that drivers/fleet operators perform a vehicle walkaround check.



Driver's Daily Vehicle Inspection Report
As required by the Federal Motor Carrier Safety Regulations for Commercial Drivers

Location:_____

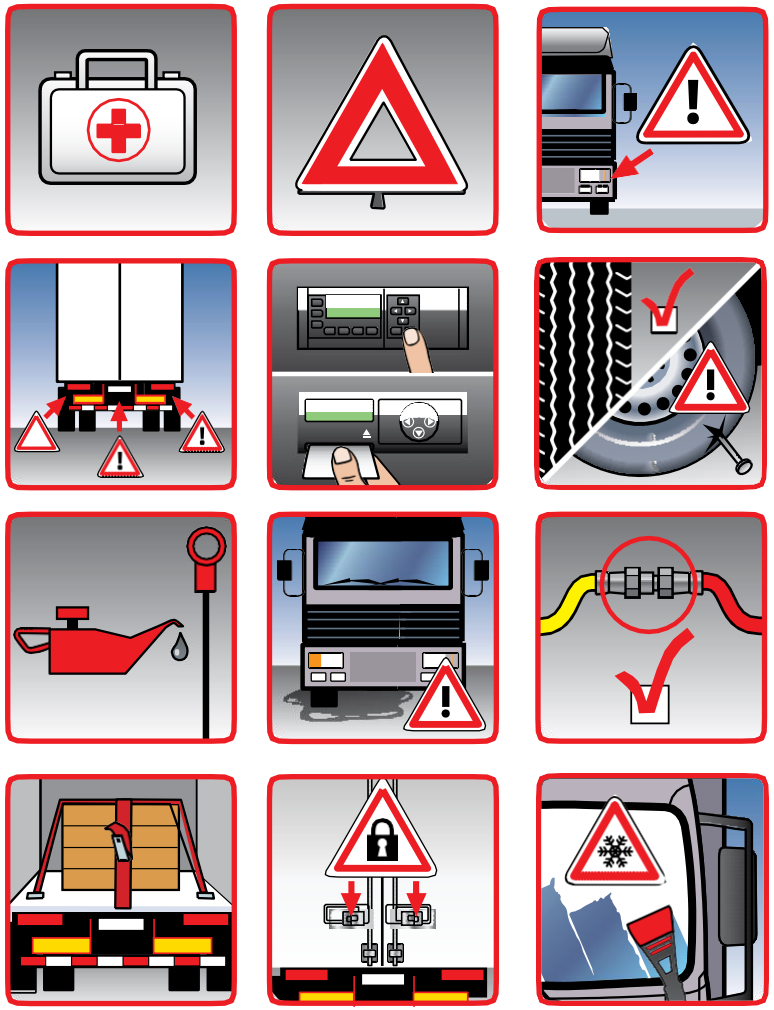
(example of checklist[2])

[1] DVIRs are enforced by the United States Department of Transportation (DOT) and Federal Motor Carrier Safety Administration (FMCSA), Federal Motor Carrier Safety Section 396.11 and 396.13.
[2] Sample source: Daily DVIR required for commercial drivers by the FMCSA in Orange County Florida.

What is a vehicle checklist?

- Vehicle inspections are commonly carried out at the beginning and/or end of the day (pre-trip/post-trip). A standard checklist may cover[1]:
  - Emergency equipment (e.g. first aid kit; warning triangle)
  - Lights and onboard devices (e.g. indicator lights and reflectors; tachograph)
  - Wheels and suspension systems (e.g. tyre profiles; a spare wheel)
  - Fluids (e.g. oil/coolant level; windshield liquid; leaks)
  - Connections (e.g. air and power connections; landing legs)
  - Load securing and security (e.g. transport unit is locked or properly sealed)
  - Precautions in winter (e.g. de-ice the windscreen; use appropriate winter tyres)

- Vehicle checklists (or DVIRs) can be completed on paper or electronically.
  - Our internal study indicates that 50-60% of fleets conduct vehicle checklists on paper.[2]



[1] Vehicle checklist for professional truck drivers, 2020, IRU/UCIR (Union Internationale des Chauffeurs Routiers).
[2] Source: Bridgestone.

Why add a digital vehicle checklist to our portfolio?

- We're anticipating a greater need for checklists driven by increasing regulations, with the main aim of ensuring well-maintained and roadworthy vehicles. For example:
  - In the United States, completing a DVIR is required for commercial vehicles each day the vehicle is in use.[1]
  - In the EU, roadside inspections are carried out by authorities in each member state to verify the vehicle roadworthiness. Drivers may also be required to produce recent inspection reports or proof that the vehicle has passed the mandatory roadworthiness test.[2]
  - In the UK, drivers are responsible for ensuring their vehicles are safe to drive before setting off on a journey, while operators must carry out safety inspections before using a vehicle for the first time. The police and Driver and Vehicle Standards Agency (DVSA) have the power to carry out spot checks and officially prohibit people from driving an unroadworthy vehicle.[3]
  - In Australia, the Chain of Responsibility (CoR) laws aim to make sure everyone in the transport supply chain–not just the driver–shares responsibility to ensure compliance with the Heavy Vehicle National Law (HVNL).[4] One example to avoid breaches is to implement a safety system that confirms loads are properly restrained[5], which is one step that could be included in a vehicle walkaround check.

[1] Federal Motor Carrier Safety Administration (FMCSA), the rules apply to drivers of commercial trucks and buses weighing 10,001 pounds or more or designed for 9 or more passengers or which are placarded for hazardous materials. Companies that operate only one such vehicle are exempt from needing to use DVIRs.

Why add a digital vehicle checklist to our portfolio?

- We want to offer better customer experience and more tools to enhance fleet safety.
  - **Higher safety assurance:** A vehicle walkaround check can report defects that cannot be detected by sensors: e.g. lights, windows and mirrors, emergency equipment, body/chassis.
  - **Save administrative time:** Completing and documenting vehicle checklists on a daily basis, especially via paperwork, is a time-exhaustive operation. The FMCSA[1] estimated that professional truck drivers spend approximately 46 millions hours each year completing “no-defect” DVIRs, out of the 58 million total burden hours associated with collecting this information. A digitised vehicle inspection process saves valuable time and also helps fleet managers react fast to defects.
  - **All-in-one user experience:** Some third-party solutions may not be integrated into the fleet management system. Webfleet Vehicle Check is fully integrated and allows fleet managers to get the most from one streamlined solution and billing service. They can create maintenance tasks directly in Webfleet based on checklist defects.

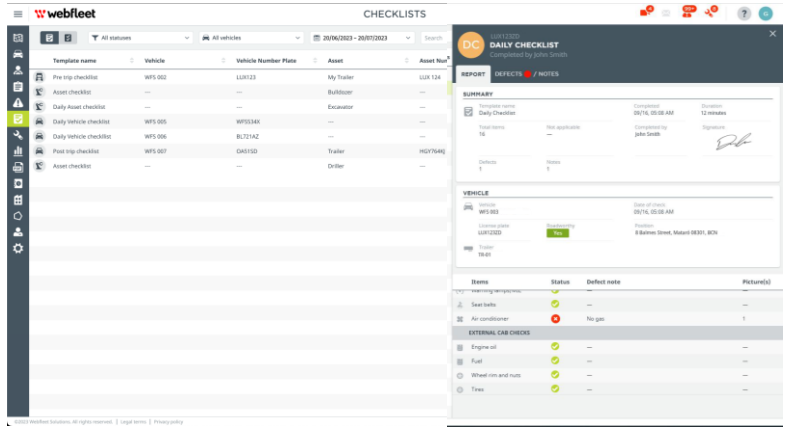
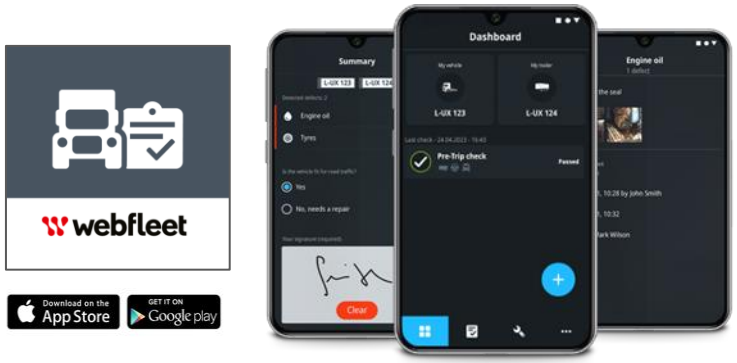
Highlights

Webfleet Vehicle Check works with the mobile app to streamline the vehicle and asset inspection process for both drivers and fleet managers. It delivers:

- Dedicated Webfleet Vehicle Check module (**for fleet managers**)
  - View submitted checklists, details and reports
  - Keep track of open defects and create a maintenance task with just a click
  - Get notified when an unroadworthy vehicle gets on the road or when a driver starts a trip without submitting the vehicle checklist
  - Supports inspections of assets, including trailers, working machinery and tractors
  - Use predefined checklist templates or create your own
- Complimentary mobile app (**for drivers**)
  - Perform a vehicle walkaround inspection by simply selecting the type of defect, adding supporting photos or notes
  - Submit paperless checklists and access past checklist reports from your fingertips
  - See the status of your vehicle or asset, including roadworthiness, number of defects and last checklist
- One integrated solution for fleet safety compliance
  - Webfleet Vehicle Check is fully integrated into the fleet management system, providing real-time control and an actionable overview in one interface

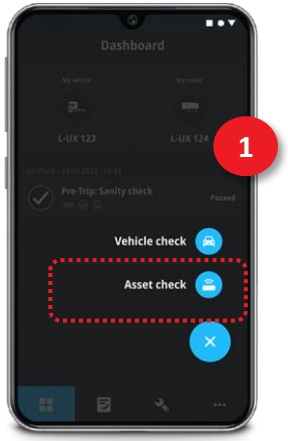


Checklists view in Webfleet



Webfleet Vehicle Check mobile app

What’s new for Q1 2024?

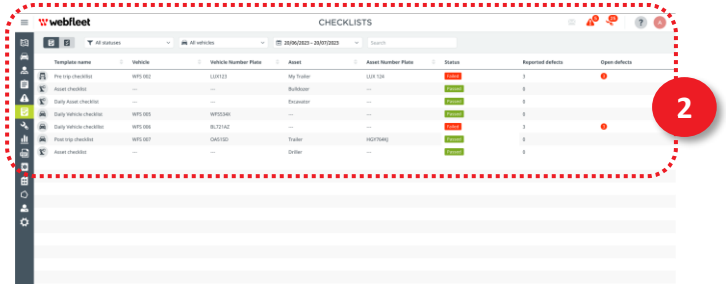


1 Inspection of assets (e.g., trailers, tractors, construction machines)

- Option to carry out an inspection on assets only, independent from the vehicle (i.e., when they are not coupled)[1]

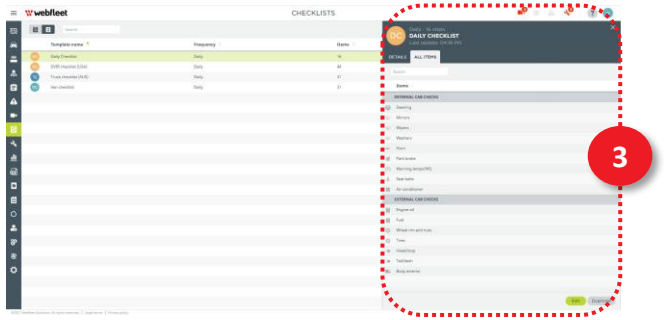
2 Asset monitoring status

- Fleet manager is alerted to any asset that is unsafe to use with indication of pass/fail status



3 Asset checklists that are ready-to-use and customisable

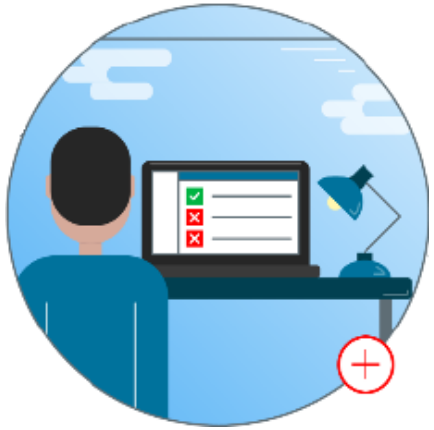
- Preset asset checklists for trailers, excavators and tractors
- Flexibility to customise the checklist for any asset



1. Separately, for assets not connected to Webfleet (no LINK box) there is a limit of checklists per week.

Webfleet Vehicle Check: How it works

1. The driver performs a walkaround inspection of the vehicle or asset to check for defects or damage. They also start the vehicle to test the lights, brakes and other functions.
2. The driver reports defects or deficiencies through the **Webfleet Vehicle Check** mobile app.
3. The checklist is signed by the driver and submitted digitally to the **Webfleet Telematics Service Platform.**



The fleet manager receiving the checklists can take action in Webfleet to either “resolve” a minor defect or “create a new maintenance task” to ensure the defect gets fixed in a timely manner.

If an unroadworthy vehicle starts a trip or a driver starts driving the vehicle without submitting the checklist, the fleet manager gets a notification.

If an asset fails a checklist inspection or is used before a checklist has been submitted, the fleet manager will be alerted in Webfleet.

Drivers can review open and resolved vehicle and asset defects.

If the driver is stopped at roadside inspection, they can show recent checklists easily via the mobile app.

Use case

Case 1: Vehicle checks are required in day-to-day operations (often driven by national regulations for safety compliance)

- Challenges:
  - Paper checklists are time-consuming, messy and difficult to keep track of
  - Finding a single platform solution that integrates a company's existing (telematics) technologies, despite there being many digital checklist options in the market
  - A good data repository for roadside inspections and audits

Case 2: Vehicle checks are part of the gating steps to ensure high safety standards (often driven by internal policy)

- Challenges:
  - In certain industries (e.g. mining, governmental fleet), keeping a zero-accident rate is crucial for maintaining the company's reputation
  - No well-established process or tool to enforce drivers' involvement to conduct vehicle checks

Case 3: It's important to be able to check that assets, such as trailers or working machinery, are in good condition and safe to use.

- Challenges:
  - Failure to carry out daily walkaround checks on assets and trailers can lead to more risk and damage to cargo and vehicles, not to mention driver injury or site accidents
  - When trailers are leased or rented, it can be difficult to know if inspections are routinely conducted

How Webfleet Vehicle Check helps

- Digitised checklist in mobile app guides drivers clearly on their daily walkaround checks for vehicles and assets.
- Real-time data feedback to the office helps fleet managers plan maintenance tasks in advance for safer operations.
- Digital archive of checklists ensures worry-free compliance for road inspections or audits.
- In our experience, one third of checklists report a defect that cannot be detected by sensors. Webfleet combines driver walkaround vehicle checks with other fleet data using sensors or tracking devices, providing one streamlined solution for your total fleet management.

Value proposition at a glance

Target audience	User/challenges	Benefits	Proof points
Fleet type: All vehicles (excluding “trailer only”)  **Key verticals with higher safety requirements:** • Transport and logistics • Passenger transport • Mining • Construction • Food and beverage • Agriculture • Rental and leased trailer fleet • Any business where vehicle, asset and trailer inspections are mandatory **Decision maker:** • Maintenance Manager • Safety Manager • Fleet Manager • Owner	• **(Fleet manager)** How can I make sure my drivers are following the vehicle check protocol? • **(Fleet manager)** My company’s reputation relies on high safety standards. I need to know and resolve any possible risk as far ahead as possible. • **(Fleet manager)** How do I ensure my leased trailers or assets are safe to operate?	**Increase road safety and vehicle and asset uptime**	• Mandate vehicle check feedback for assigned vehicles (drivers) • React fast with real-time reporting of vehicle defects and unroadworthy statuses. • Enable regular trailer and asset inspections, including checks on safety systems such as TPMS, lighting and braking.
	• **(Driver)** Filling a paper checklist every day is taking too much time and hassle in addition to my regular tasks. • **(Fleet manager)** How can I handle all these checklists in a smart way without missing a crucial defect that may impact my vehicle’s safety?	**Digitise the inspections and maintenance process**	• Perform a walkaround inspection by simply selecting the type of defect, adding photos or notes. • Eliminate time-consuming paperwork and archiving hassles for drivers and the office. • Access submitted checklists, details and reports in seconds. • Take necessary maintenance actions based on the reported defects.
	• **(Fleet manager/driver)** How can I comply with regulations simply and efficiently?	**Comply with safety regulations**	• Use preset checklists and customise inspection items on the checklist to fit your needs. • Retrieve recent checklists easily when a roadside inspection takes place. • Digital records are easily archived for audit.

Overview

Supported roles

DRIVER

Mobile app support

Drivers can perform vehicle and asset inspections and submit paperless checklists from their fingertips.

FLEET MANAGER

Webfleet Checklist module

Fleet managers can get access to vehicle and asset checklist reports and keep track of reported and open defects. Also, they can configure and assign checklists to drivers.

Features

Instant notifications

Fleet managers get notified when an un-roadworthy vehicle goes on road or when a driver starts a trip without the checklist.

Drivers get notified when starting a trip with an unroadworthy vehicle or unsafe asset.

Preset checklists and defects list

Save time by simply selecting a preset checklist template, the type of defect and adding photos or notes to help explain any issues with the vehicle.

Past checklists and reports

Drivers and fleet managers have an easy way to retrieve recent vehicle and asset inspection reports when a roadside inspection takes place.

Vehicle roadworthy detection

Highlights when your vehicle is unsuitable for the road if unroadworthy defects are selected (predetermined by local regulations and end user).

Trailer and asset monitoring

See the status of your trailer or asset and whether it is unsafe to use if a checklist has failed (predetermined by local regulations and end user).

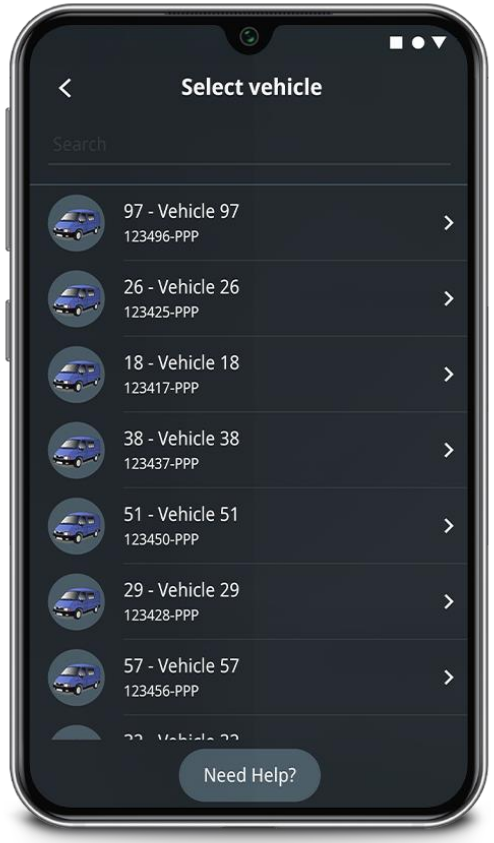
Seamless maintenance

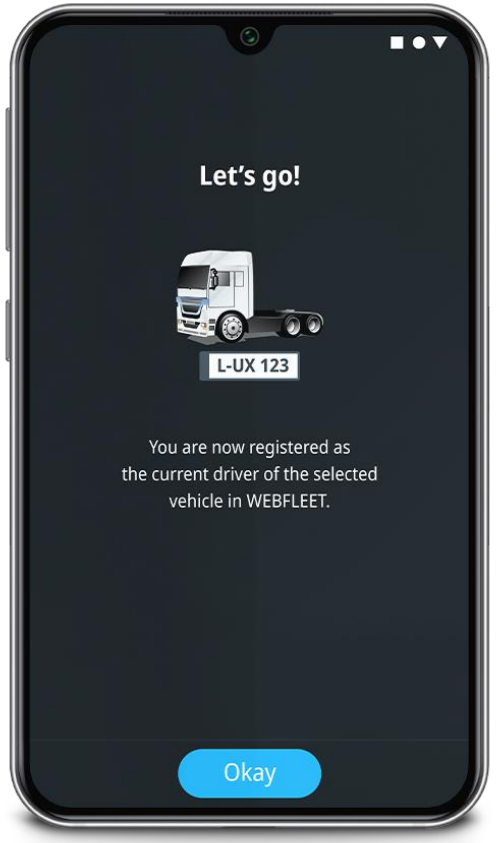
Create a maintenance task with just a click when a defect is reported by the driver.

Mobile app: Welcome page and vehicle selection

For drivers

Drivers can log in with their credentials.





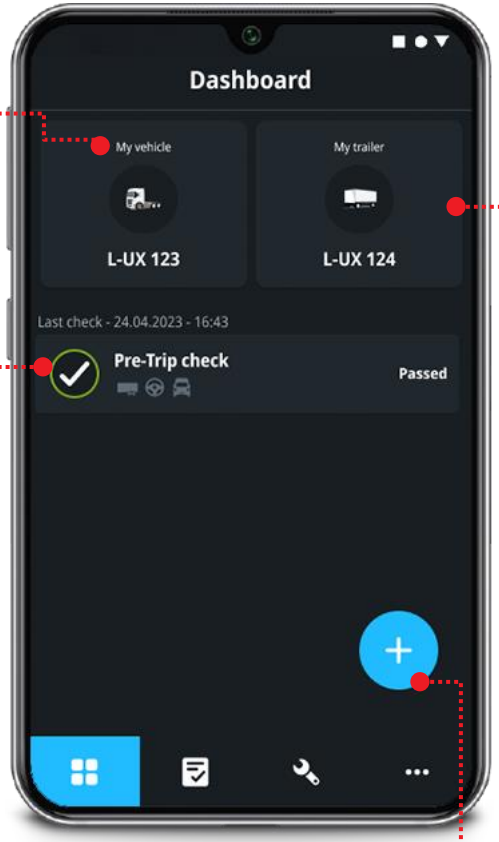
If drivers are not automatically assigned to a specific vehicle, they can assign themselves to an available vehicle.

Mobile app: Dashboard view (app homepage)

For drivers

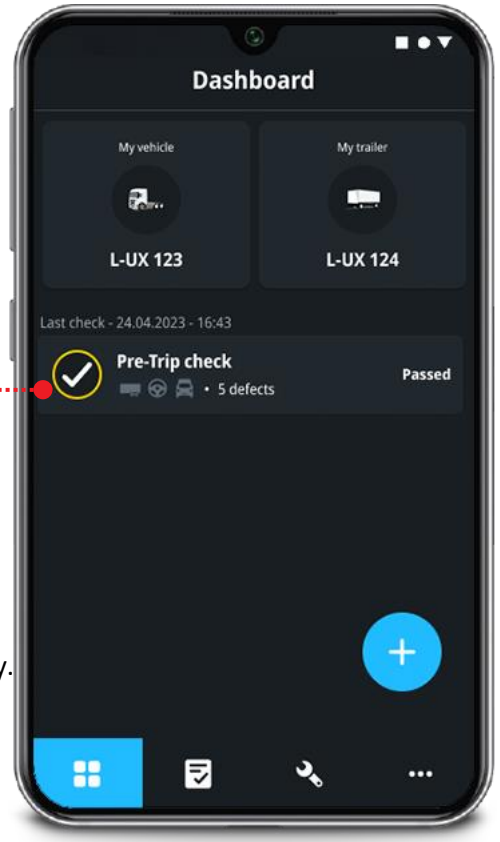
View license plate of assigned vehicle. Change vehicle or return to an unassigned status.

View license plate of assigned trailer. Change trailer or return to an unassigned status.

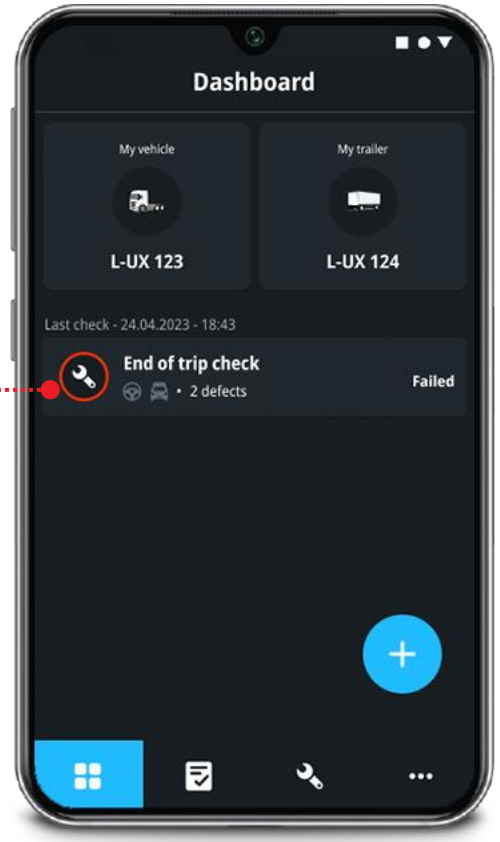


Last checklist: properly submitted, no defects, the vehicle is roadworthy.

Press "+" button to start a new checklist (on vehicle or asset).



Last checklist: properly submitted, 5 defects, the vehicle is still roadworthy.



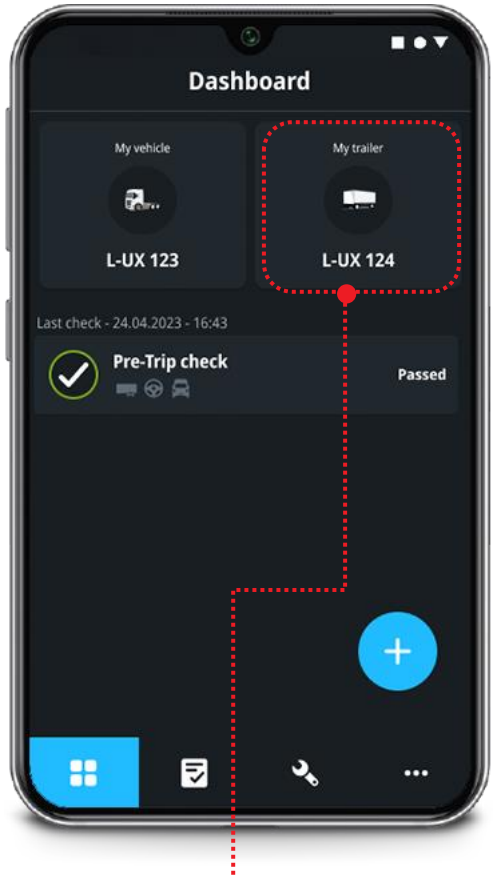
Last checklist: properly submitted, 2 defects, the vehicle is unroadworthy.

Mobile app: Trailer selection *(new feature)*

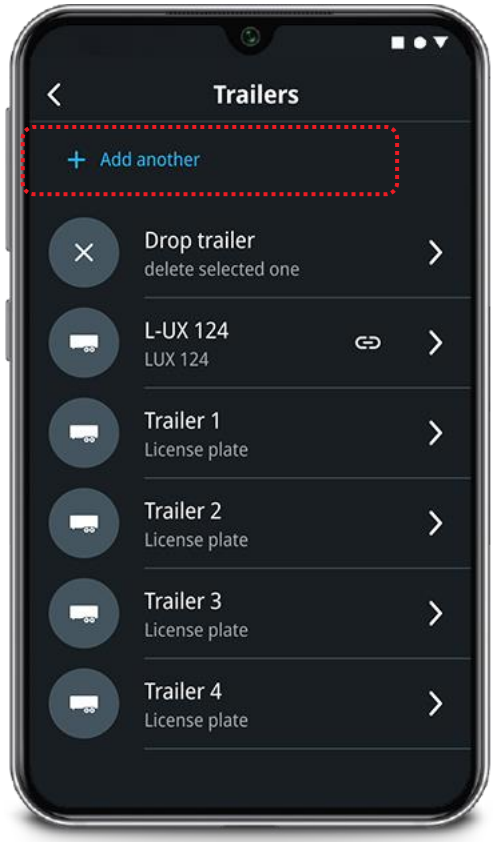
For drivers

Selecting a trailer for a check

- Driver can now assign a trailer
  - either connected with a LINK device
  - or with no LINK device onboard



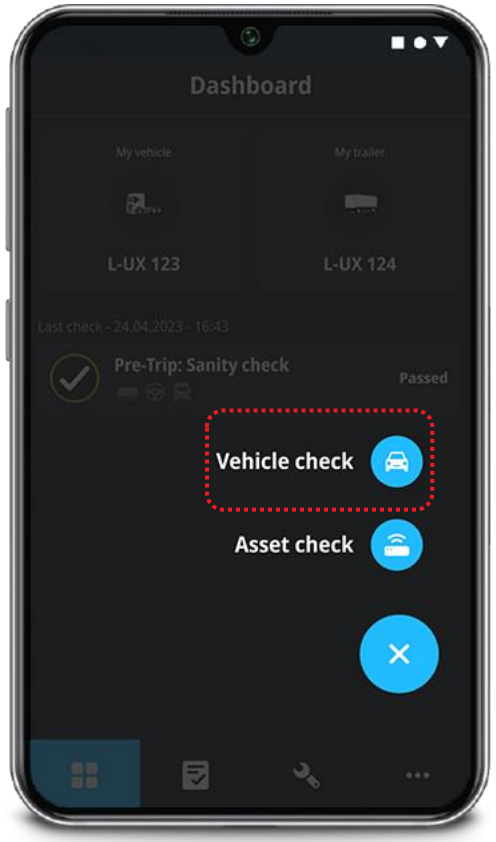
Select a trailer to inspect. This trailer will be automatically synchronised when a new asset check is started.



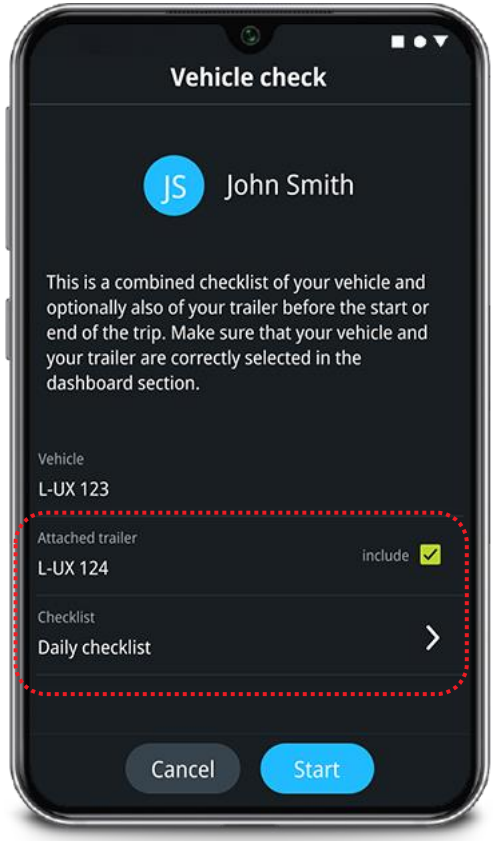
A list of connected trailers is provided. The list is synchronised with the one in the Webfleet Asset module.
There's an option to press 'Add another' to create an unconnected trailer that is not connected in Webfleet.

Mobile app: Complete a vehicle check

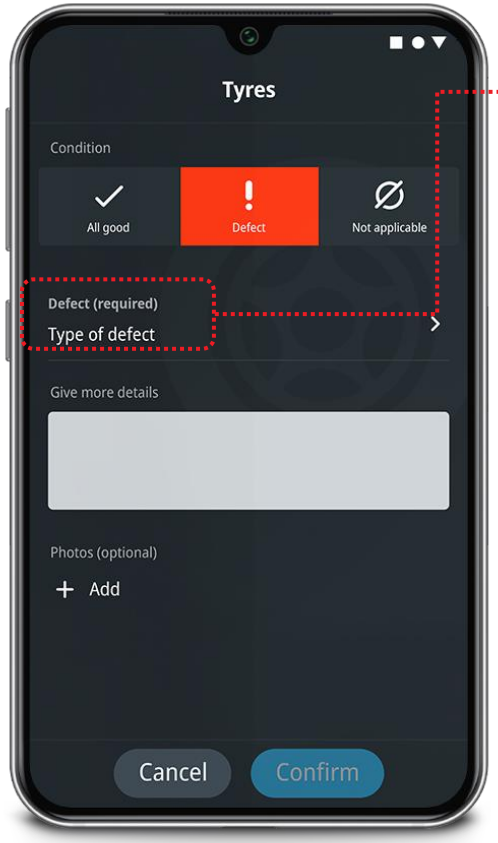
For drivers



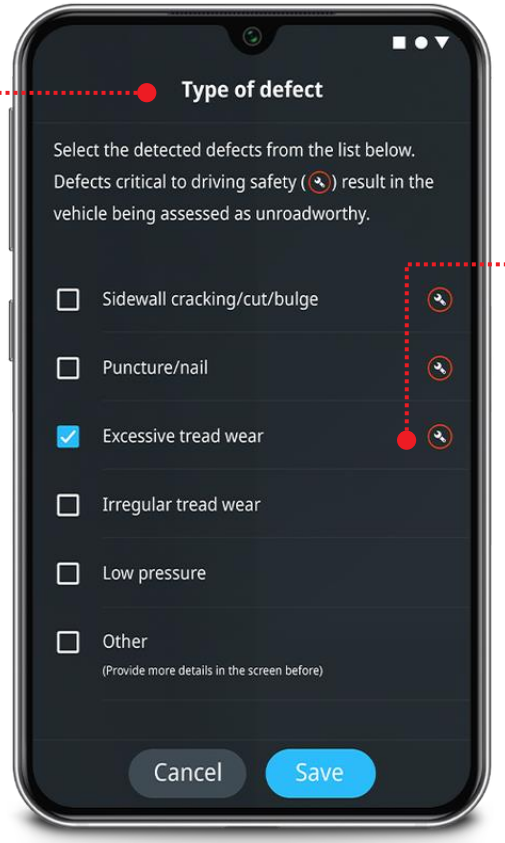
Press the floating button to generate a new vehicle check or asset check.



Access to a checklist template. Change templates between pre-defined ones.[1]
Option to add an attached trailer to the inspection.



Report defects and defect types. Include details relative to defects and photos (optional).



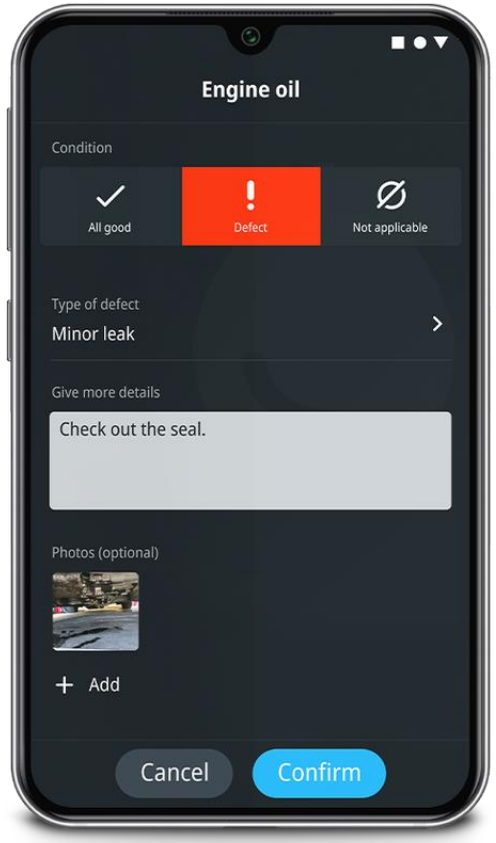
Specify defect types from a predefined list.
Some defects make the vehicle unroadworthy.

If the driver ticks a defect marked with unroadworthy severity, the vehicle is classified as unroadworthy.

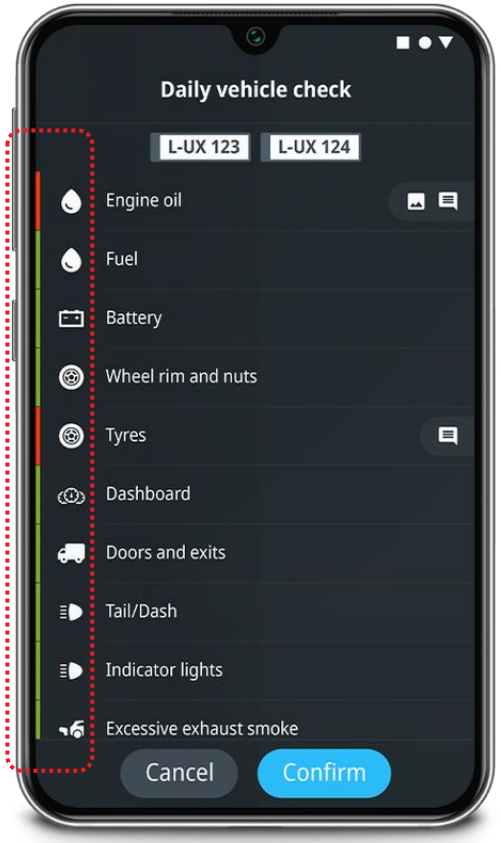
[1] i.e. fleet manager chooses checklist templates for driver

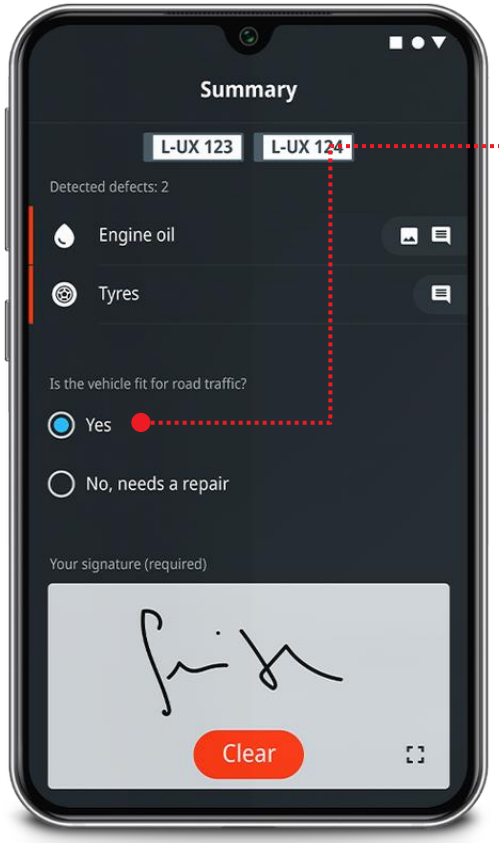
Mobile app: Complete a vehicle check

For drivers



For each defect, drivers have the option to add a note and attach up to 3 photos.





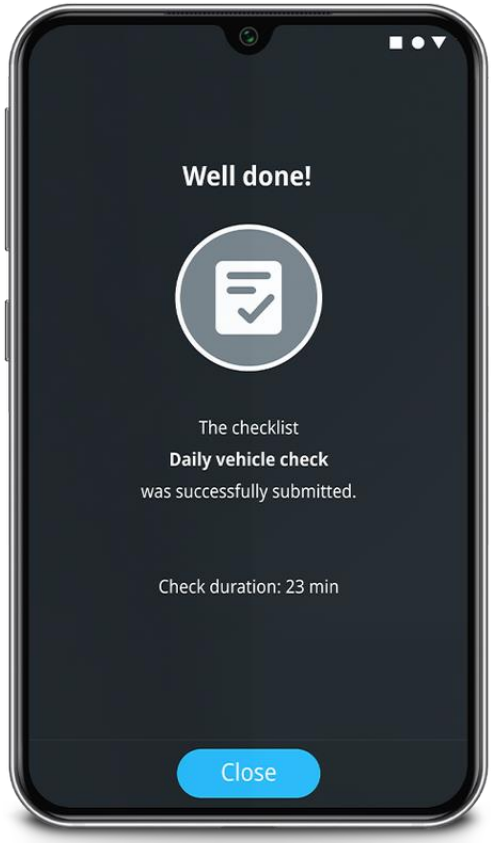
Roadworthy

Yes:
Only minor/cosmetic defects reported

No:
Major defect reported – vehicle should be repaired before starting a trip*

* The roadworthy status is a default suggestion based on the severity of reported defects. The driver has the option to change this status based on their own judgement.

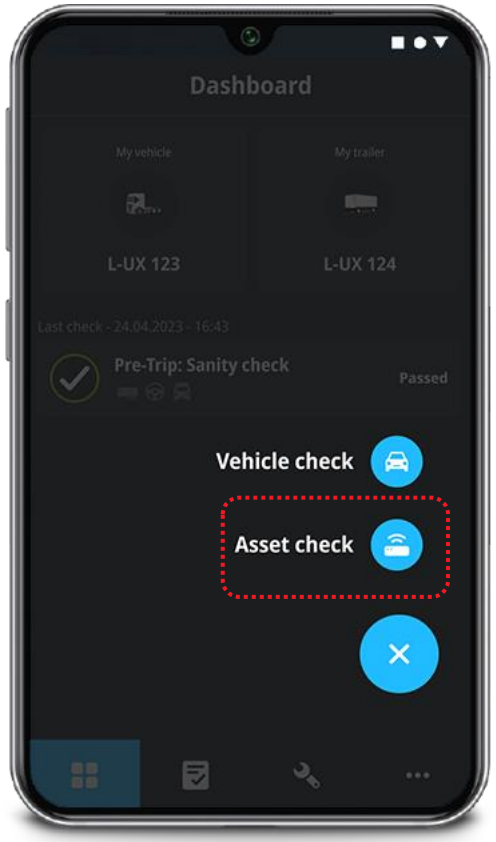
Before or after the driver signs off the checklist, a summary showing the status of checklist items (“Ok”/“Defect”) is available for review.



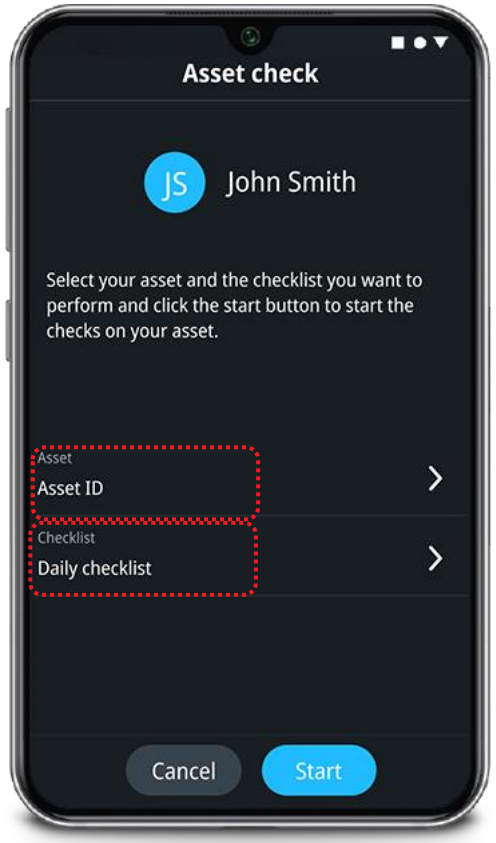
Drivers can submit checklists to fleet managers in real time.

Mobile app: Complete an asset check *(new feature)*

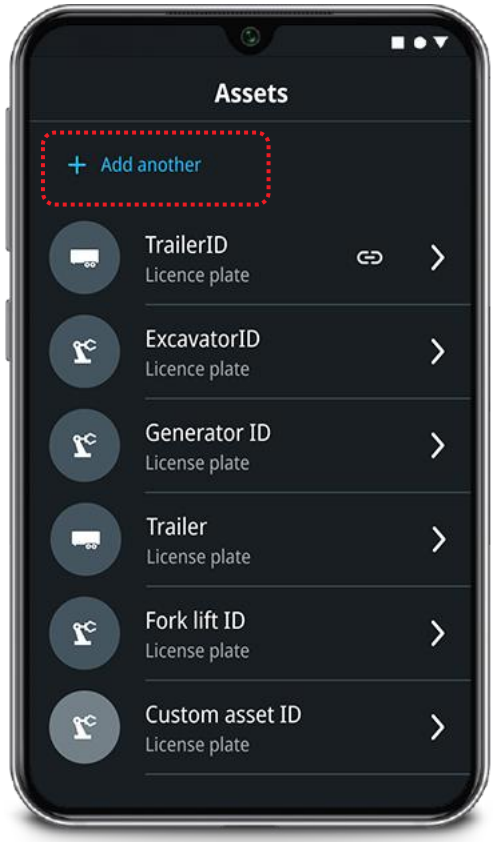
For drivers



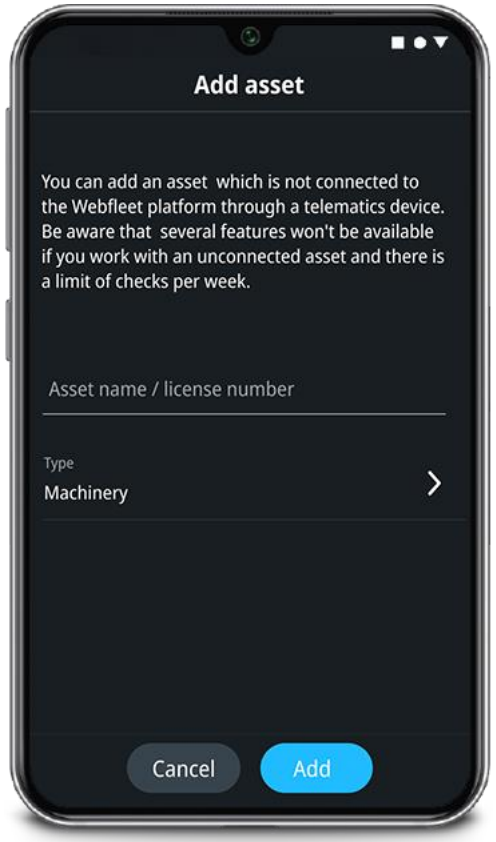
Press the floating button to generate a new vehicle check or asset checklist.



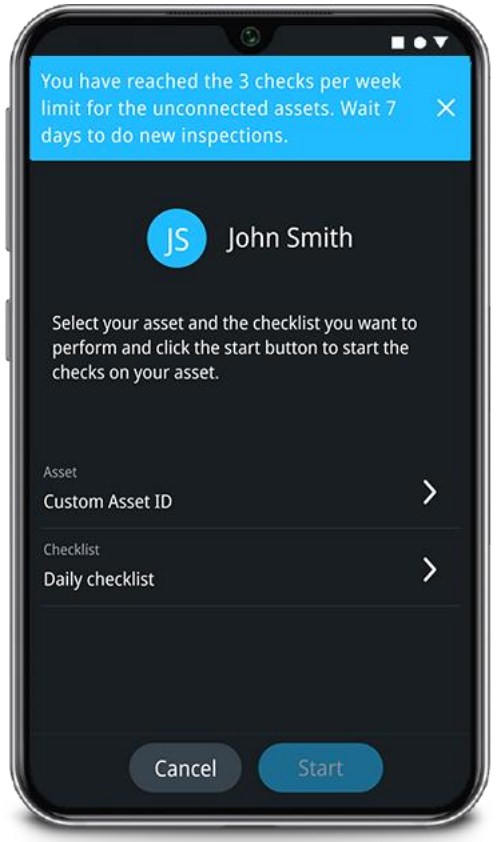
An asset must be selected. Access to a checklist template is defined by the fleet manager.



A list of connected assets is provided. The list is synchronised with the Webfleet Asset module.



Press 'Add another' to create an asset that is not connected in Webfleet[1]

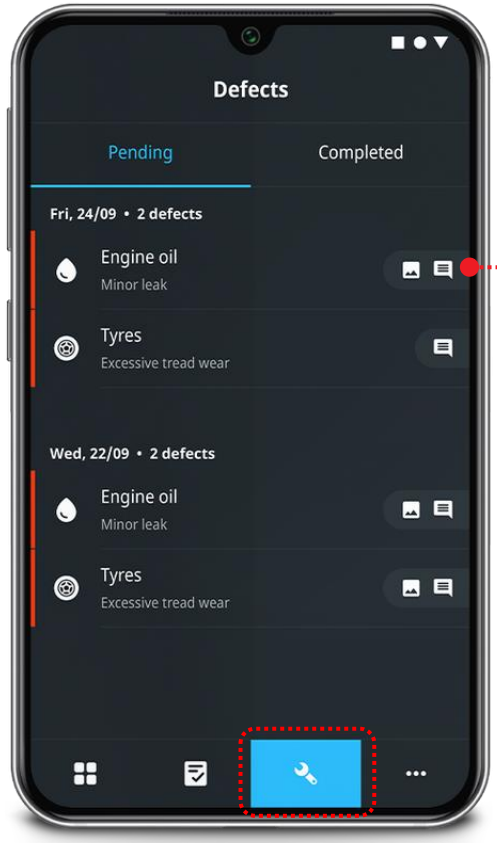


The number of checklists on assets that are not connected is limited per week.

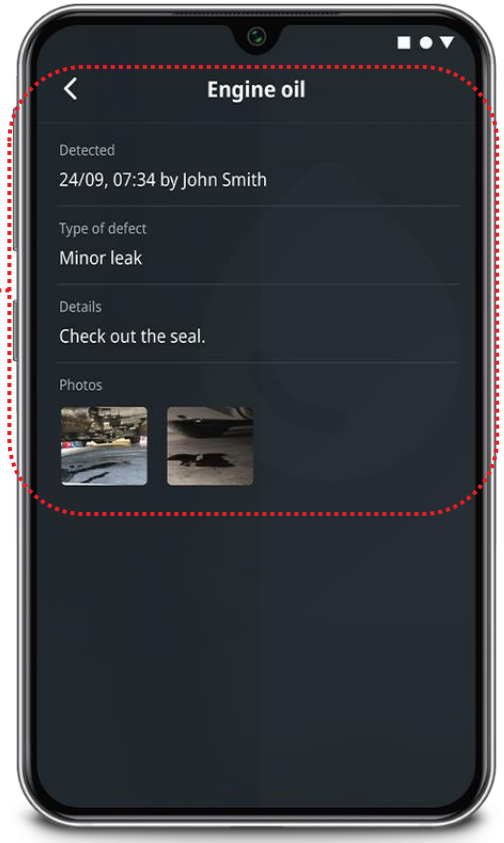
[1] i.e. it does not have a LINK device onboard

Mobile app: Review list of defects and status

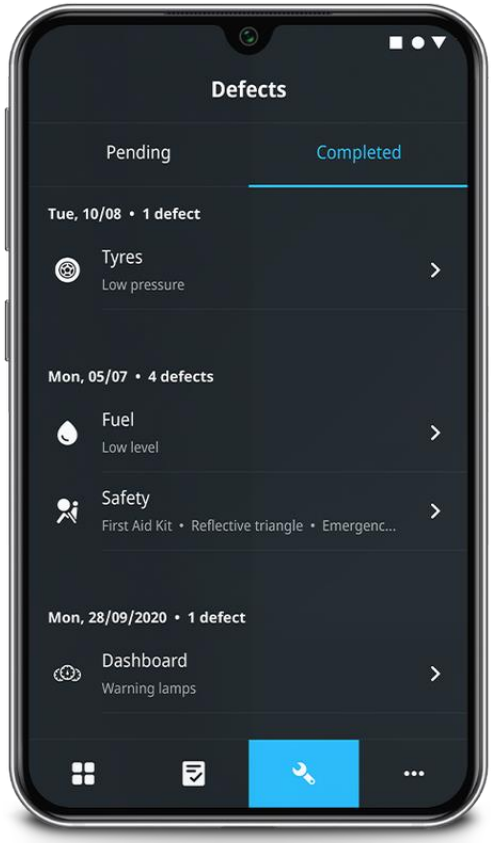
For drivers



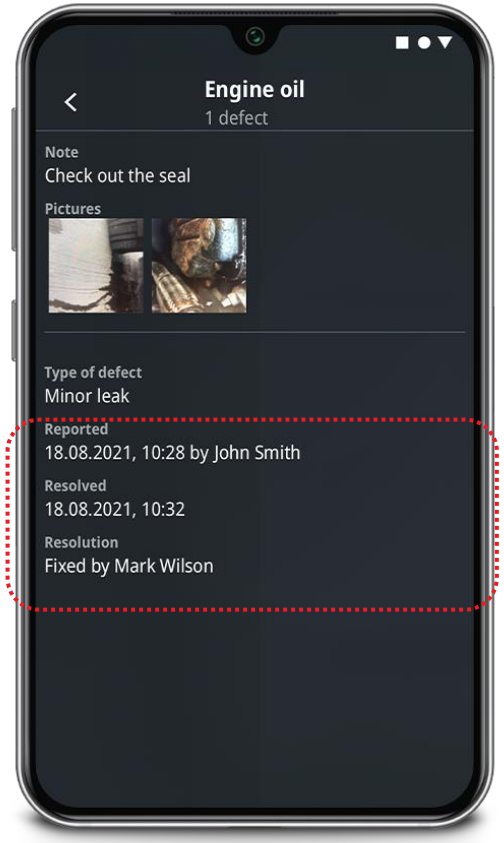
Drivers can see open defects.



Details of the defect are displayed.



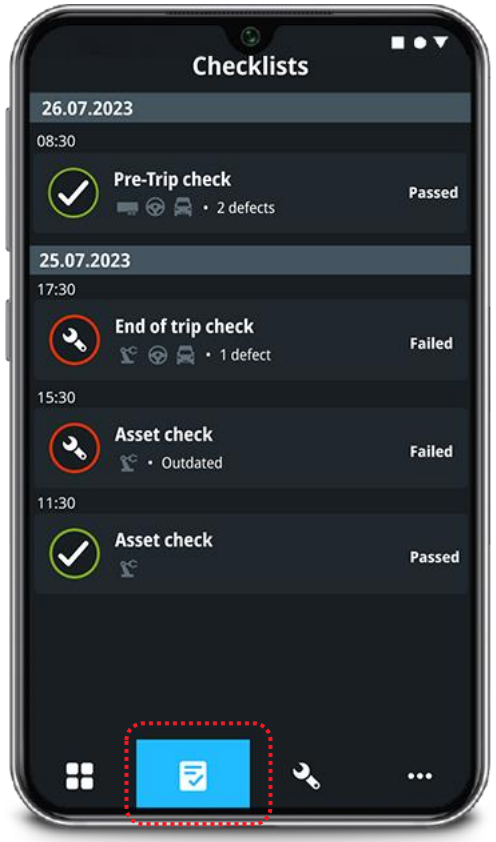
Drivers can also see defects that have been resolved by fleet managers via Webfleet.



The date and description of the resolution are displayed.

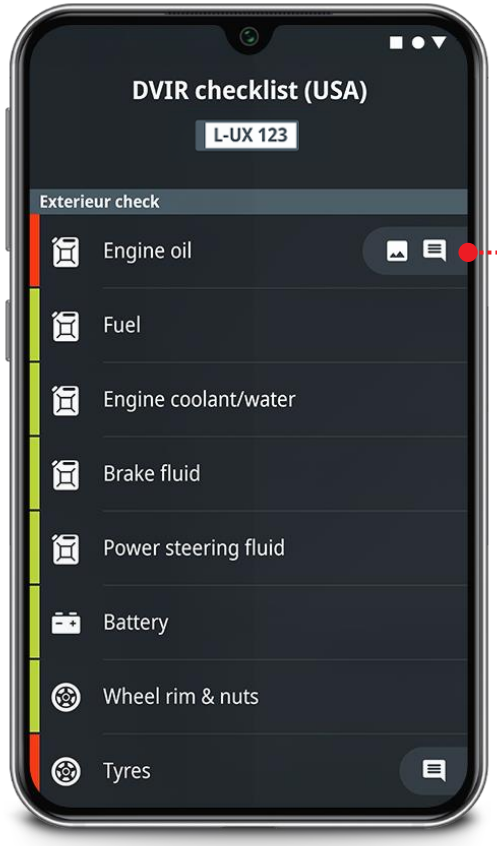
Mobile app: Access to past checklists

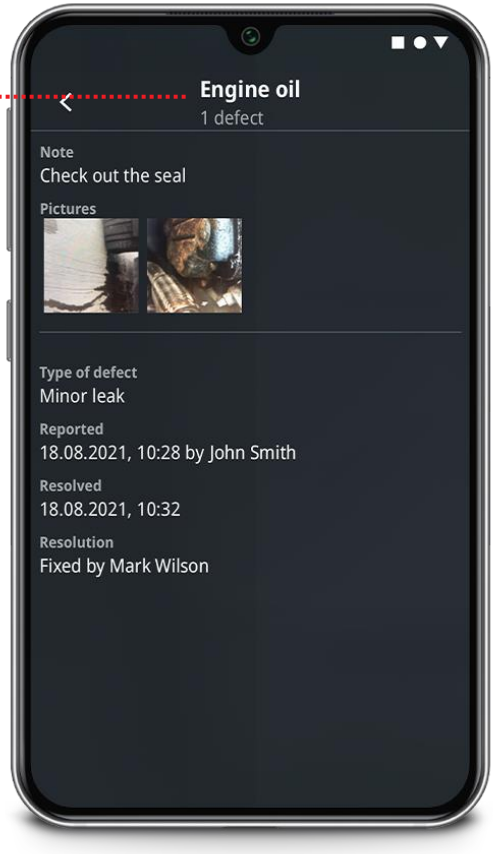
For drivers



Drivers can view past checklists.*

* Last 10 checklists submitted.



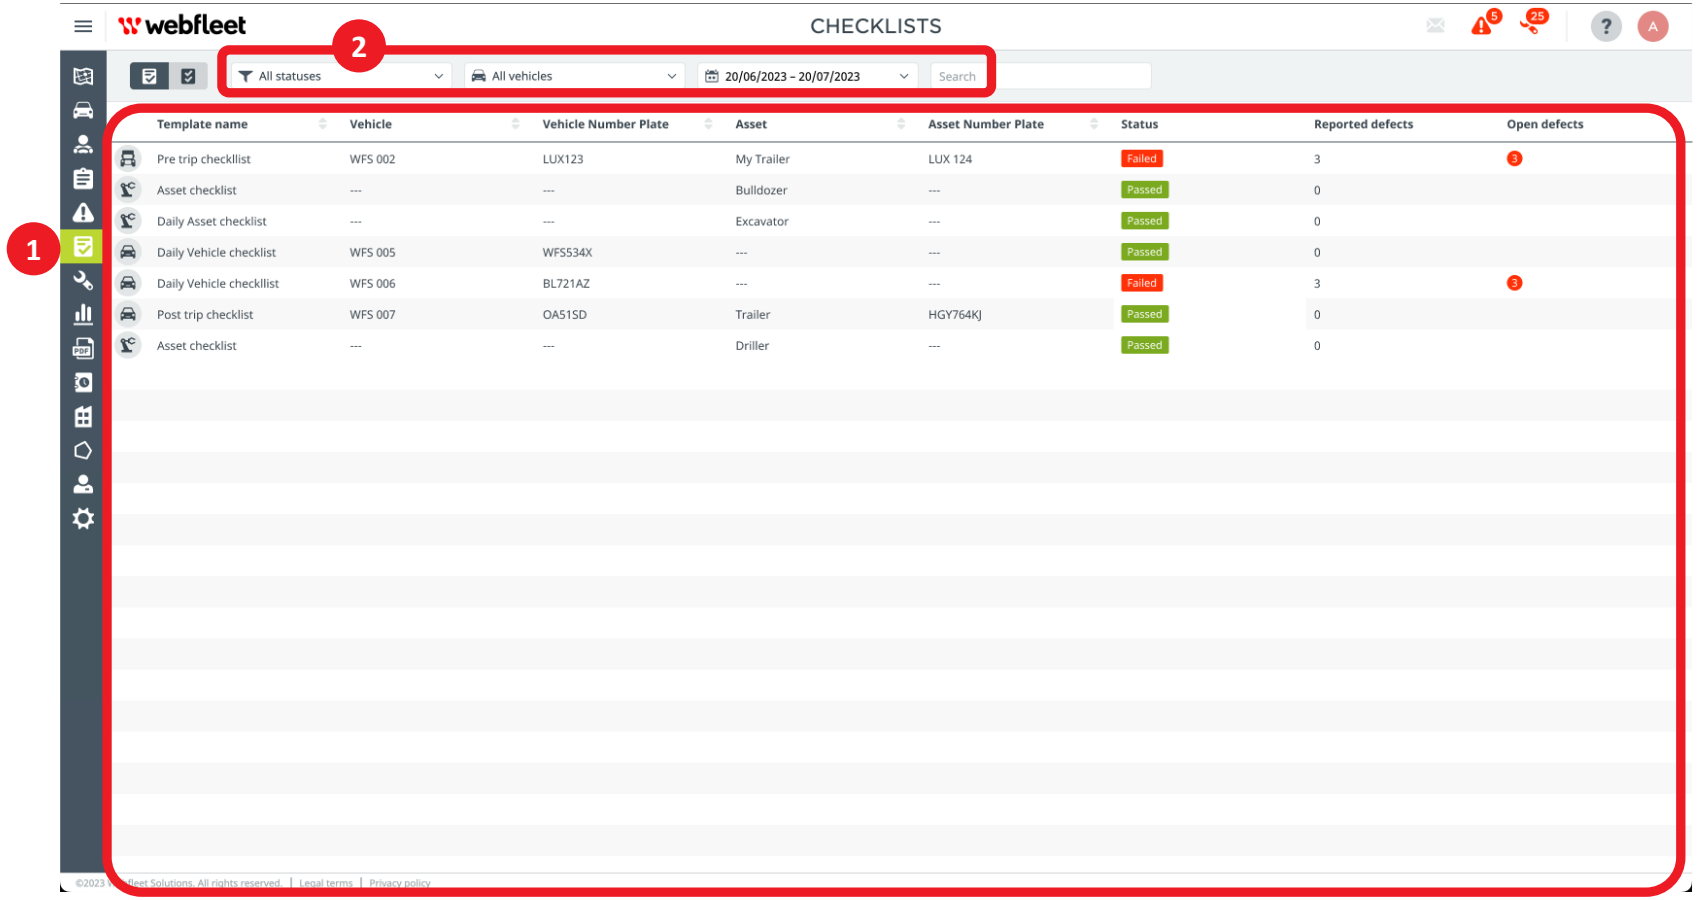


Drivers can easily scroll down the screen and show more details to the road inspector.

Checklists module: Menu view

For fleet managers (in Webfleet)

1. A new main menu view displays a list of submitted vehicle and asset checklists, including:
   - Checklist name
   - Vehicle
   - Licence plate
   - Checklist status
     - Vehicles: Pass or Fail[1]
     - Assets: Pass or Fail
   - Reported defects
   - Open defects
   - Notes
   - Duration
   - Date
   - Completed by (driver name)



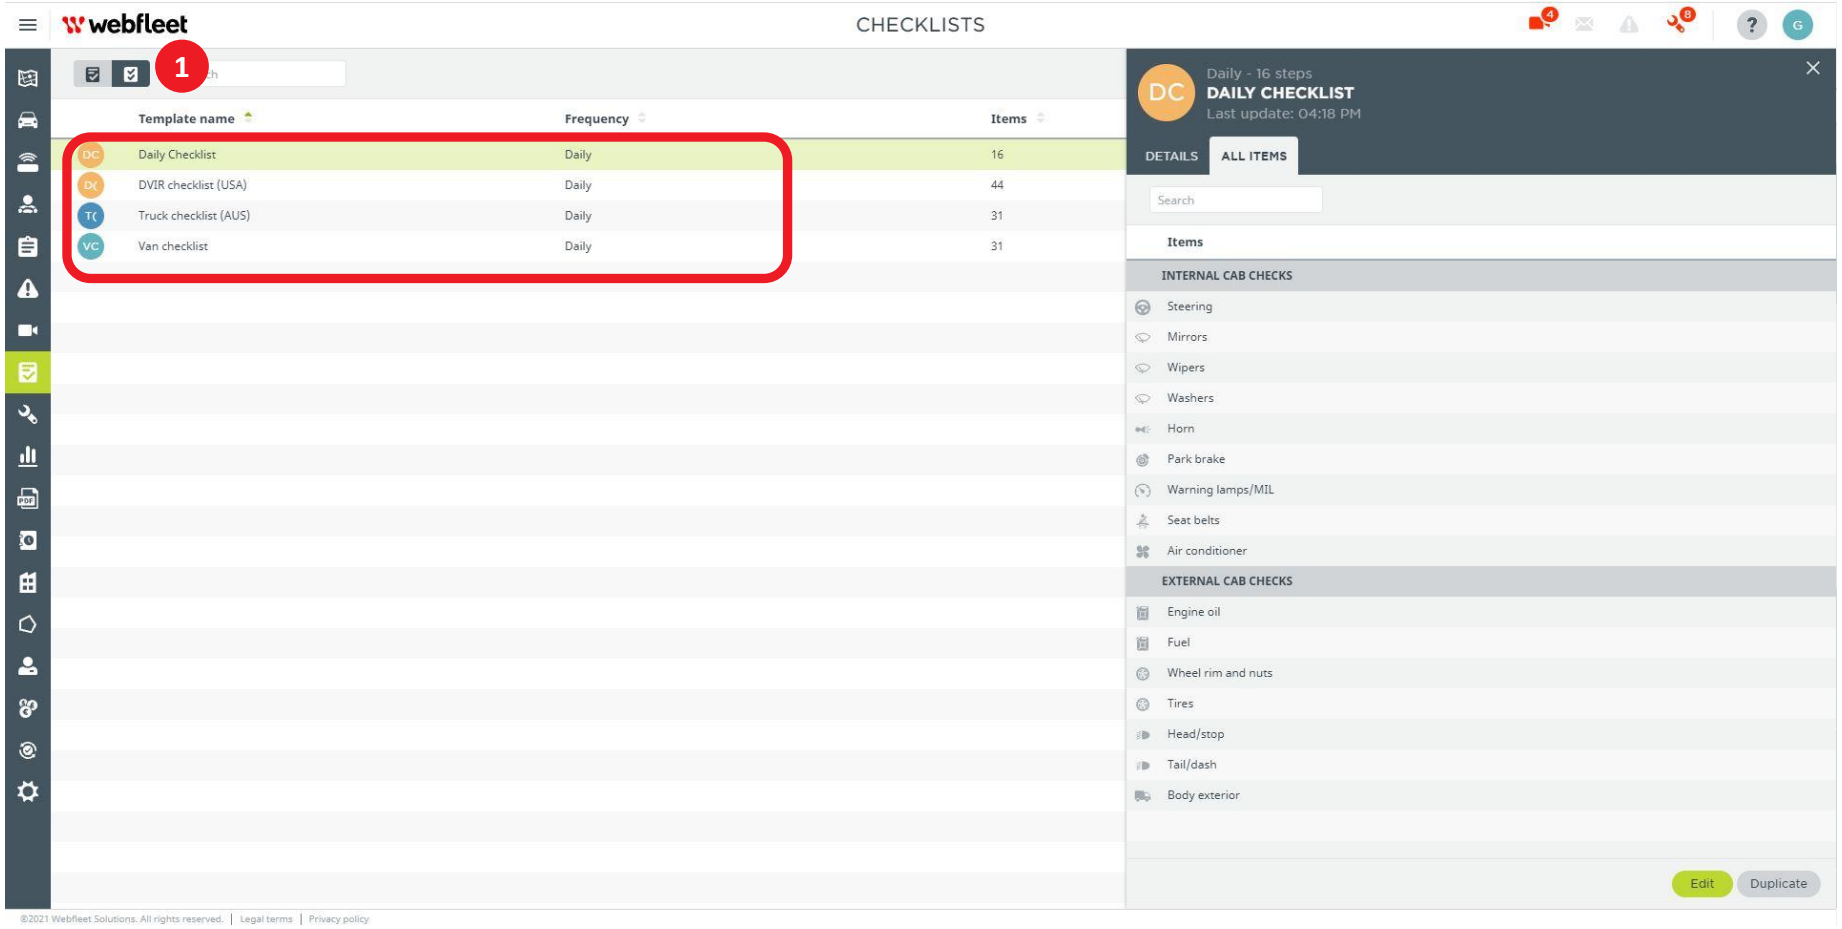
2. You can filter the checklists by vehicle, asset, driver, date or defects.

[1] Vehicles: Pass or Fail leads to a roadworthy or unroadworthy vehicle shown in the Vehicle's Details.

Checklists module: Checklists management

For fleet managers (in Webfleet)

1. We provide a preset list of checklist items. Fleet managers can easily manage and configure templates according to their needs by:
   - Removing or adding items
   - Duplicating a checklist
   - Customising allows flexible selection of items from checklist template



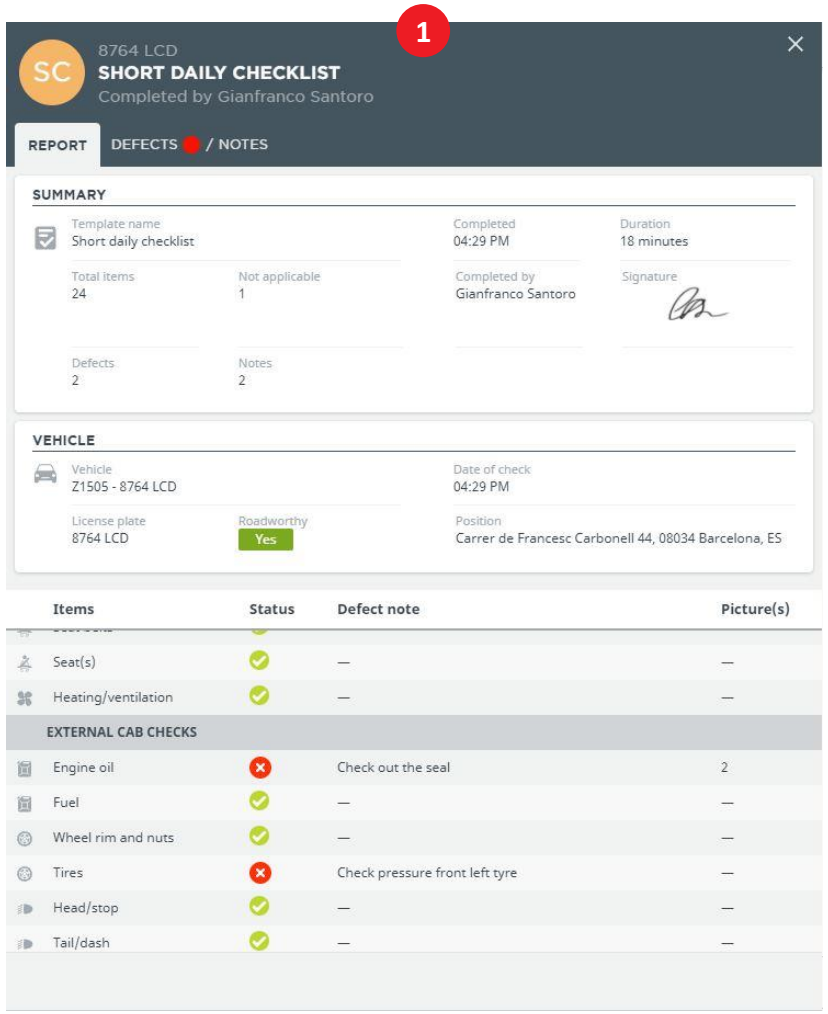
Checklists module: Details

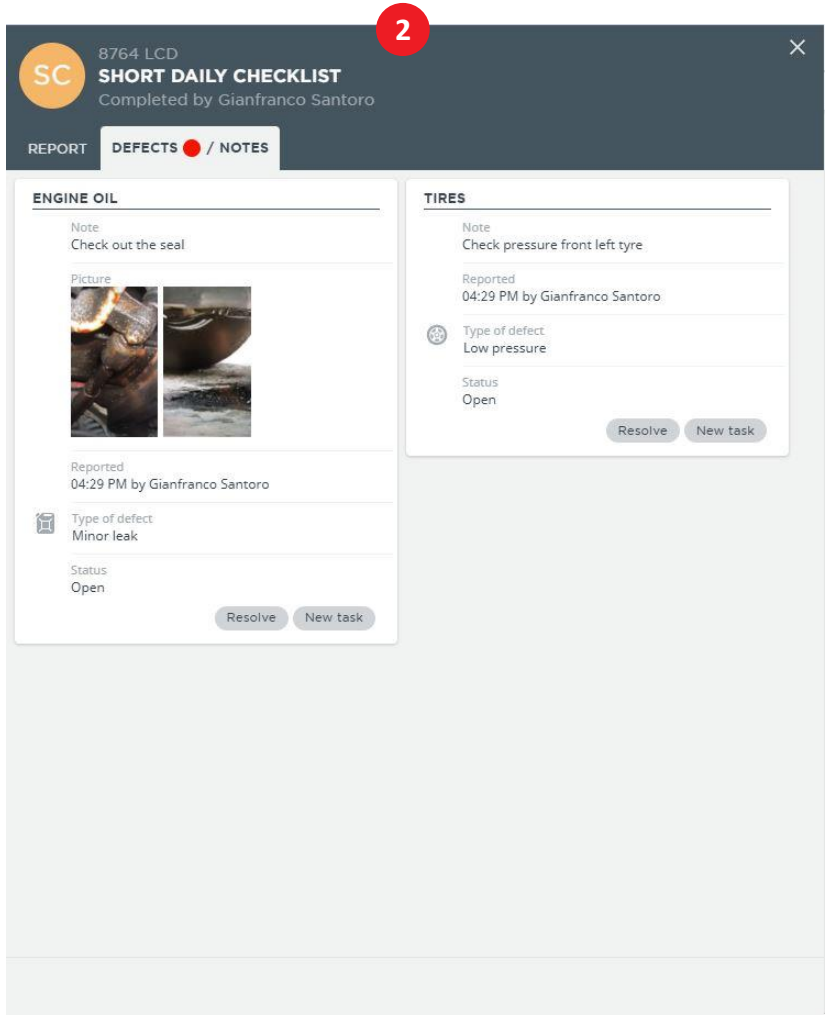
For fleet managers (in Webfleet)

Fleet managers can open a checklist and see details on the checklist card:

1. "REPORT" tab:
   - Summary of the checklist, pass/fail status
   - Vehicle or Asset info, roadworthy status
   - List of checklist items, status, notes and images

2. "DEFECTS/NOTES" tab:
   - This section highlights open defects.



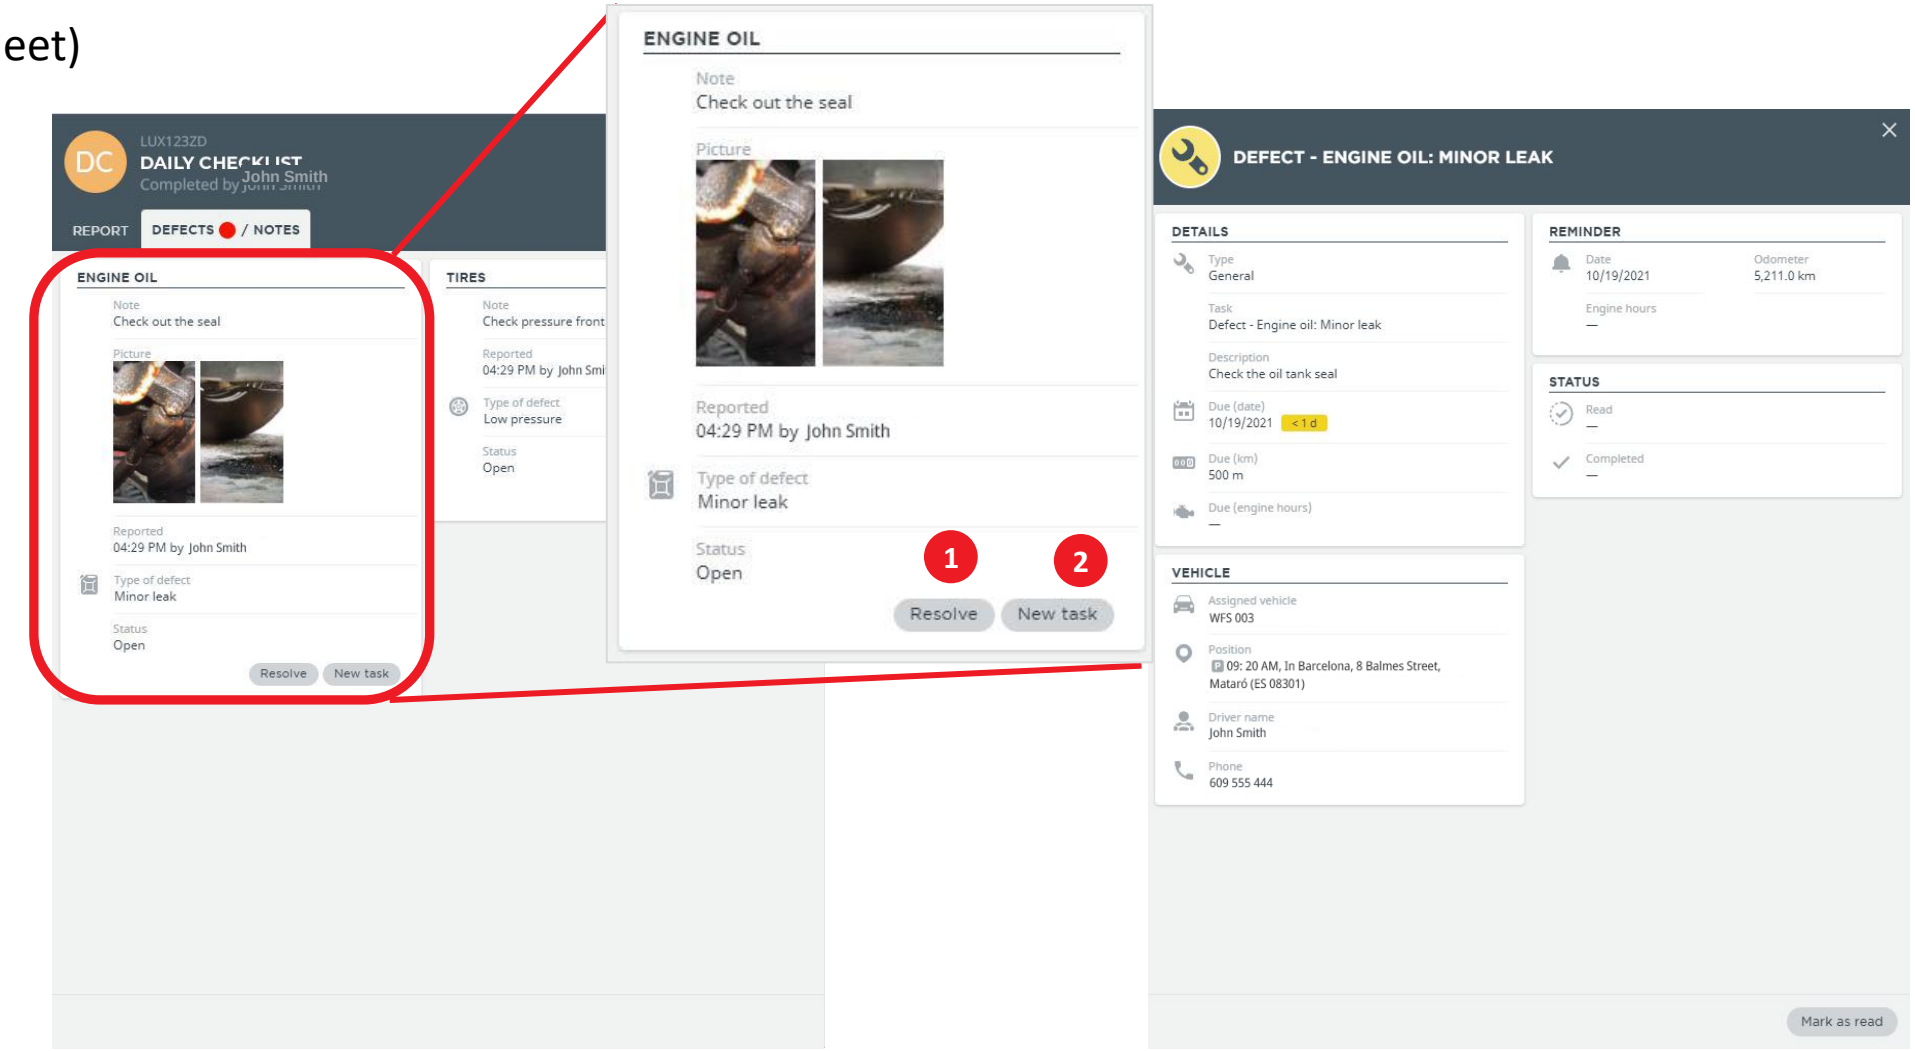


Checklists module: Resolve a defect or create a maintenance task

For fleet managers (in Webfleet)

In the details of the “DEFECTS/NOTES” tab, the fleet manager can take action to either:

1. “Resolve” a defect or
2. Create a “New task” for maintenance



Checklists module: Notifications

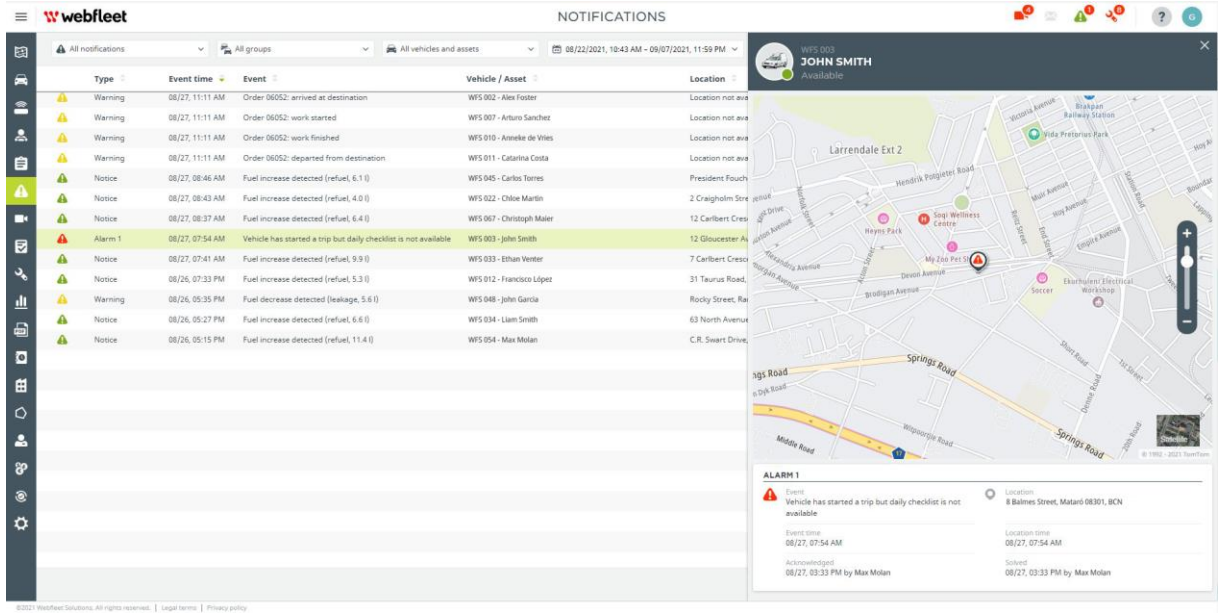
For fleet managers (in Webfleet)

The fleet manager will receive a notification when:

1. An unroadworthy vehicle starts a trip.
   - A vehicle is classified as unroadworthy when it has one or more defects with unroadworthy severity.
   - Examples of defects that result in pass/fail of a checklist that leads to a roadworthy or unroadworthy vehicle:

Defect	Not working/blocked	Partially damaged	Minor/cosmetic defect	Other
Park brake	Unroadworthy	Unroadworthy	Roadworthy	Roadworthy
ABS[1]/EBS[2]	Unroadworthy	Unroadworthy	Roadworthy	Roadworthy
Steering	Unroadworthy	Roadworthy	Roadworthy	Roadworthy

2. A driver starts driving a vehicle without submitting the checklist.



3. The fleet manager is alerted in Webfleet when an unsafe assets fails a checklist or is used.
   - An asset is classified as unsafe to use when it fails a checklist, because one or more defects are detected that are predetermined by local regulations and the end user.[3]
   - Examples of defects that result in pass/fail of a checklist that leads to an unsafe trailer:

Defect	Not working	Major physical damage	Minor/cosmetic defect	Other
Lights: Turn indicators	Fail	Pass	Pass	Pass
Brake lights	Fail	Pass	Pass	Pass

[1] ABS: Anti-lock Braking System.
[2] EBS: Electronic Braking System.
[3] Driver still has an option to mark the checklist as a 'fail'.

Benefits

Increase road safety and vehicle and asset uptime

- Mandate checks and feedback from drivers for vehicles and assets.
- React fast with real-time reporting of vehicle and asset defects and unroadworthy statuses.
- Enable regular trailer inspections, including on safety systems such as TPMS, lighting and braking.

Digitise the inspection and maintenance process

- Perform walkaround inspections by simply selecting the type of defect and adding photos or notes.
- Eliminate time-consuming paperwork and archiving hassles for drivers and the office.
- Access submitted checklists, details and reports from your fingertips.
- Take necessary maintenance actions based on the reported defects.

Comply with safety regulations

- Use preset checklists and customise inspection items on the checklist to fit your needs.
- Retrieve recent checklists easily when a roadside inspection takes place.
- Digital records are easily archived for audit.
