What's new

1. A more modern and intuitive user interface has been added.
2. Existing functionality has been fine-tuned.
3. Several features that were requested by our customers have been implemented.

Mobile 1.0 V. Mobile 2.0 feature comparison

	Notifications/ alerts	Vehicle and Asset Tracking[1]	Trip data	Maps view	Traffic	Orders	Messages	Addresses	Auto-refresh	Push notifications	Remaining Driving Times (RDT) information[2]
Webfleet Mobile 1.0	✓	✓	✓	✓	✓	✓	✓	✗	✗	✗	✗
Webfleet Mobile 2.0 (2020)	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓

[1] Asset tracking requires both the installation of a LINK 340 tracking device and an active Asset Tracking tariff subscription.
[2] Remaining Driving Times (RDT) or Tachograph Manager Plus/TachoShare Plus additional service is required.

Highlights

- Active monitoring
  - Track both your assets[1] and vehicles on one interface.
- Increased efficiency
  - Notifications and alerts warn you of potential disruptions.
- More convenience
  - When dispatching orders, prefill your saved customers' addresses directly from Webfleet's address database in the Webfleet Mobile app.
  - New search filters help reduce search time.
- Better driver management
  - Ensure your drivers are staying safe and taking proper breaks with daily Remaining Driving Times (RDT) information[2] .

[1] Asset tracking requires both the installation of LINK 340 tracking device and an active Asset Tracking tariff subscription.
[2] Remaining Driving Times (RDT) or Tachograph Manager Plus/TachoShare Plus additional service is required.

Target audience

Who	What they need when away from the desk	Webfleet Mobile proof points
• Focus on small and medium businesses with passenger cars, LCVs, HCVs and/or assets. • Ideal for business owners, fleet managers, operations managers, logistics coordinators and fleet dispatchers who are often away from their desks.	• Accurately locate a single vehicle or the entire fleet.	• View current positions of a vehicle quickly via the map screen or vehicle list screen.
	• Accurately locate assets[1].	• View current positions of assets via the map screen or vehicle list screen and make sure they are on site, or can be located quickly when needed.
	• Know where and when drivers were working. • See where vehicles have been in the past.	• Access previously recorded trip data to follow the route and mileage driven.
	• Receive notification at the soonest possible time when a potential disruption happens.	• You receive notifications when a vehicle enters or leaves a previously designated geo area, and when the order status changes.
	• Manage drivers' work schedules.	• Dispatch new orders and view the progress of existing orders from a selected vehicle.
	• Give accurate ETAs to customers.	• On one view, locate your vehicles in real-time, see where they're headed and check their ETA.
	• Get a clear view of driving times for the entire fleet without relying on the Remaining Driving Times (RDT) information provided by drivers[2].	• All drivers' daily RDT information can be seen under the Driver view.

[1] Asset tracking requires both the installation of LINK 340 tracking device and an active Asset Tracking tariff subscription.
[2] Remaining Driving Times (RDT) or Tachograph Manager Plus/TachoShare Plus additional service is required.

Mobile app features

Notifications/alerts

Get instant alerts whenever a vehicle enters or leaves a previously designated geo area and when an order status changes.

Vehicle and Asset Tracking

Locate your vehicle or asset in real-time, see where they're headed and get the driver's information.

Trip data

Access previously recorded trip data by date for a single vehicle or the entire fleet. Check the start and finish points, the journey duration, the distance travelled, recorded trip/order details and the Driver ID.

Maps and satellite view

Find a single vehicle or the entire fleet on TomTom Maps or Google Maps, with the ability to search by using the vehicle list and filters, including vehicle availability, statuses, trip mode and groups.

Traffic

View TomTom Traffic information on the map and dispatch the best suited person for new orders or jobs.

Orders

Dispatch orders and view the progress of an order from a selected vehicle, including the location of the fleet handling the order and the estimated time of arrival.

Addresses

Add prefilled locations of existing addresses from Webfleet's address database to an order.

Messages

View text, status and order messages. Send messages straight to the driver's PRO Driver Terminal.

Language support

English, German, French, Dutch, Spanish, Portuguese, Italian, Polish, Czech, Swedish, Danish.

New improvements to existing features

Notifications/alerts

- Number counter for all unread notifications
- Single button to resolve all unread notifications
- Swipe gesture to resolve a specific notification

Vehicle details

- Button to call a driver's phone number directly from the driver details[3]
- Vehicle odometer information
- Daily summary of business trip mileage
- Driver's Remaining Driving Times (RDT) information

Orders

- Prefill saved addresses directly from Webfleet's address database

Messages

- Improved messaging view (conversation style)
- Number counter for all unread messages

Smart filters

- Search all text within Vehicles list
- Search by Driver's names
- Search by Vehicle in Messages
- Search Orders by Order Status
- Search Orders by Period

Language support

- Additional languages are now supported: Polish, Czech, Swedish, Danish

User feedback

- New button for users to share feedback via email in Settings

[3] Ability to call is only supported when a phone number is added to driver details.

New modern and intuitive user interface

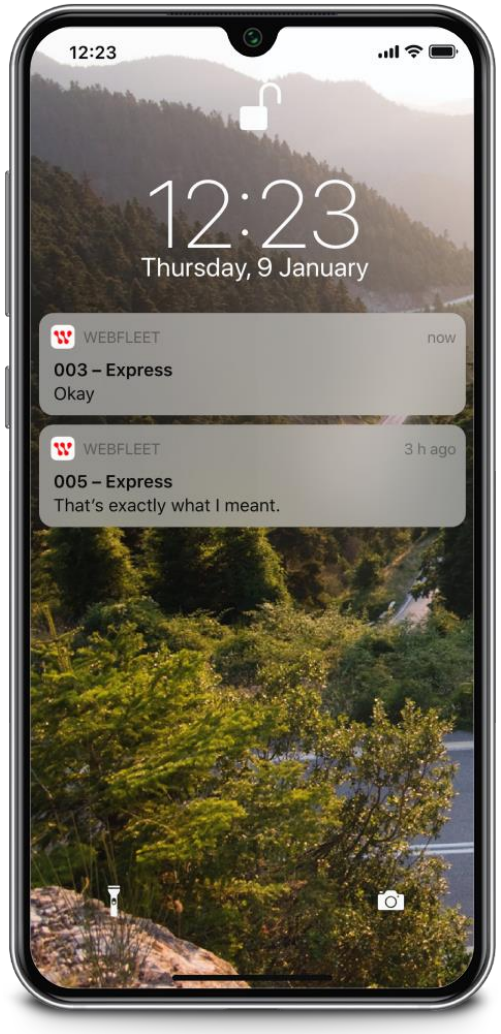
New functionality: Push notifications

With either an Android or iOS mobile device, you receive push notifications for the following events that display in the Notifications section of your phone:

- Incoming text messages
- Status messages
- Theft/towing events

Benefits

- The dispatcher gets automatically notified about important events or incoming messages without the need to manually check the mobile app.



New functionality: Auto-refresh

When open, the Webfleet Mobile app will auto-refresh to display the most up-to-date information for these specific screens:

1. Map view screen
2. Vehicles list screen
3. Detailed vehicle screen

Benefits

- The dispatcher does not need to manually refresh these screens to get the most-up-to-date information while in the app.

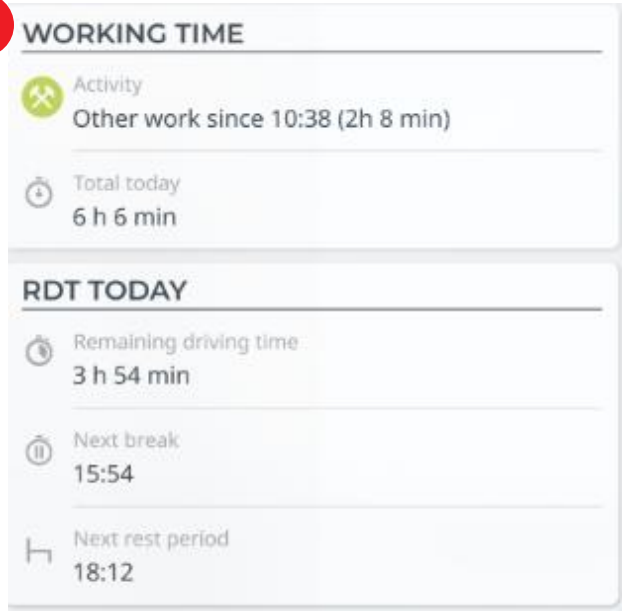
2

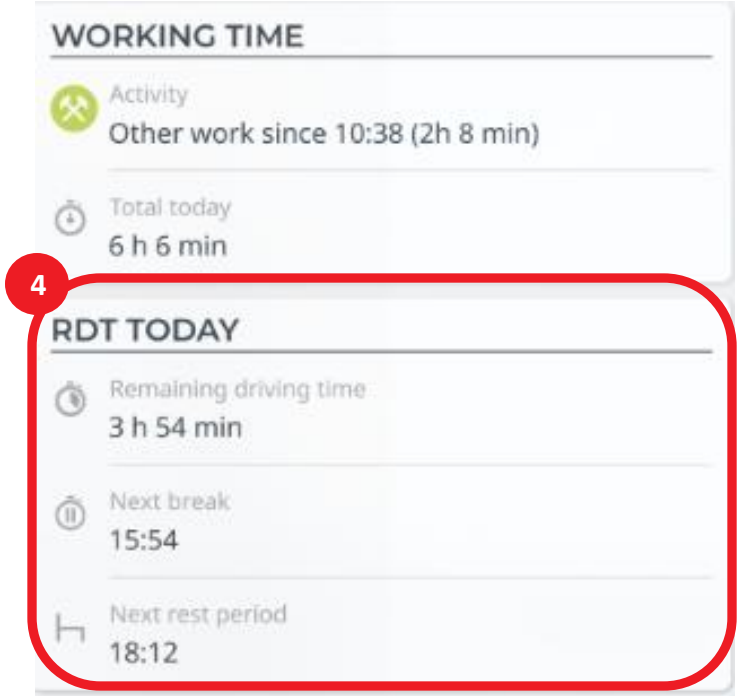
3



New functionality: Remaining Driving Times – Daily

By clicking on each Driver card, you find daily Remaining Driving Times (RDT) information[2].

4. RDT today
   - **Daily remaining driving time**
   - **Next break**: The time of the next break
   - **Next rest period**: The time this shift ends or the day's rest time begins



Benefits

- All relevant information is displayed in one quick view. The dispatcher can use this to make ad-hoc decisions for a single vehicle, while on the go.

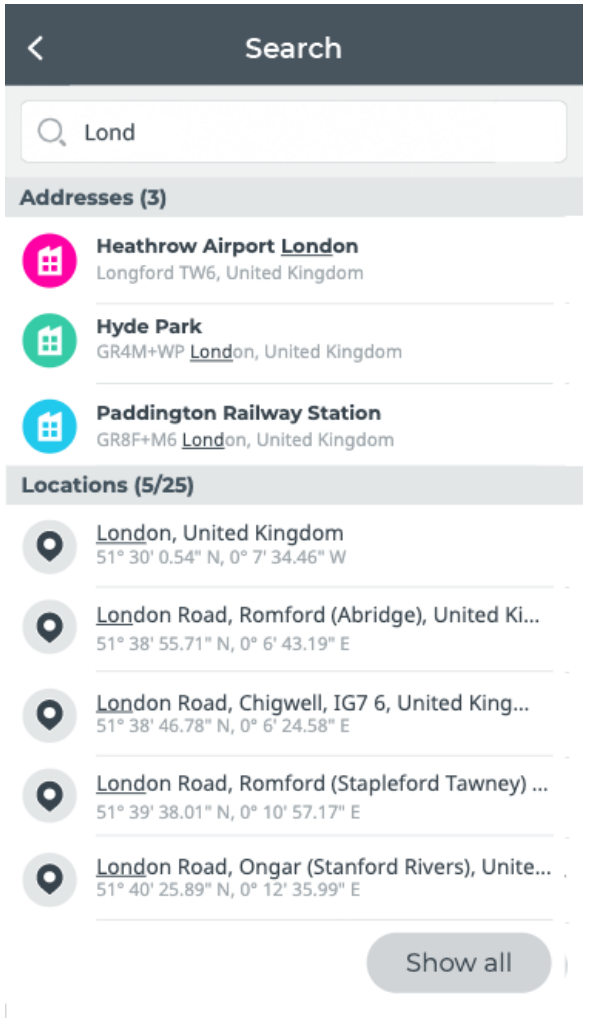
[2] Remaining Driving Times (RDT) or Tachograph Manager Plus/TachoShare Plus additional service is required.

New functionality: Addresses database

When dispatching orders, prefill your saved customers' addresses from the Webfleet address database directly in Webfleet Mobile.

Benefits

- The dispatcher spends less time and effort creating new orders with destinations using the mobile app.



Customer benefits

Manage on the go

- Manage your fleet and assets while away from your desk[1].
- Notifications and alerts about important events or incoming messages reach you as they happen. You can react quickly to things that affect your business regardless of when they occur.

Improve efficiency

- Get all the information you need when you need it to react fast to alerts and disruptions and avoid unnecessary delays.
- Make your dispatching process more flexible and dynamic with real-time driving time information of your drivers.

Stay compliant

- The calculation of remaining driving times is automated, so there's less chance of human error and no need to contact your driver[2]. This helps make your compliance process both simpler and more accurate.

Easy to use app interface

- Intuitive in-app experience allows you to navigate with minimal clicks and complete tasks in fewer steps.

[1] Asset tracking requires both the installation of LINK 340 tracking device and an active Asset Tracking tariff subscription.
[2] Remaining Driving Times (RDT) or Tachograph Manager Plus/TachoShare Plus additional service is required.

Download instructions

- Existing Webfleet Mobile app users
  - Depending on the user's mobile device settings, the latest Webfleet Mobile app will automatically download to the device or the user will have to manually download the latest update via the Apple App Store (iOS) or Android Play Store.

- New Webfleet Mobile app users
  - Users can download the latest Webfleet Mobile app from the Apple App Store (iOS) or Google Play Store (Android) for free.
  - To sign in, users can enter the same username and password that is used for WEBLEET on their desktop[5].

[5] Admin user must have a Webfleet subscription with TRACK or LINK tariff or higher.
